1st Level Specializing Master Course in Fundamentals of the Air Transport System 2022-2023 Edition

Organized by:

**DAER - Department of Aerospace Science
and Technology - Politecnico di Milano**

1. PURPOSE

The air transport system is an inherently multidisciplinary field, where technical and organizational skills are needed to face both normal operation and developmental programs.

Today, commercial aviation is recovering from the pandemic effects experiencing a significant growth at a global level in many sectors. All major players in the system, including airlines, handling and airport management companies, as well as regulators and supervisory agencies, will need to cope with this trend, relying on highly skilled professionals with an excellent technical qualification in aeronautics and a deep knowledge of the processes typical to the air transport system, from the global picture to the innermost components. Moreover new air transport modalities are emerging and the integration of them in the current situation is an impending necessity.

The Master Course will allow the participants to develop a complete knowledge of the air transport system in its multiple aspects, by means of a structured theoretical approach well suited for engineers, followed by a practical internship period of a minimum of 4 months in a qualified organization, with the tuition of experienced industry staff.

At the end of the Course, the participants will have gained a good familiarity with the field of the air transport, which will constitute a primary asset for a successful job application in the field, easing their transition from the academic world to the job market. The previous editions of the Course are a good example of this opportunity.

2. BEGINNING AND END OF THE COURSE

The Course will start within the end of **March 2022** and will end within **March 2023**.

2. PROGRAM (60 CFU)

Teaching Activities (40 CFU)

Module 0: General Abilities

Module 1: Civil Aviation System

Module 2: Cybersecurity

Module 3: Quality Assurance and Compliance Monitoring

Module 4: Safety Management System

Module 5: Accident Investigation

Module 6: Human Factors and Psychological Aspects

Module 7: Emergency Management

Module 8: Airport Capacity

Module 9: Airport Management System

Module 9: Air Transport Company

Module 10: Continued airworthiness, Maintenance and Engineering

Four Months Internship (10 CFU)

Individual Activities (10 CFU)

3. REQUIREMENTS

A Bachelor of Science (Laurea) in Engineering is required. For candidates graduated abroad, equivalent qualification in the respective educational Institutions will be considered. The Admission Board will select the students to be accepted by means of CV evaluation and oral examination.

Enrolment requests should be received by **February 28th 2022**. A maximum of 25 students will be admitted.

4. FEE

Total costs: € 7.500 (€ 7.000 tuition fee plus € 500 enrolment fee) to be paid in two instalments.

5. SCHOLARSHIPS

Scholarships covering the whole tuition fee or a part of it will be made available by collaborating industrial subjects. They will be assigned by the Admission Board after the expiration of the enrolment deadline and within **March 31th 2022**.

6. LOCATION

Politecnico di Milano, Bovisa Campus, Via La Masa 34, Milano. The internship period will be hosted by the industrial subjects acknowledged by the Organizing Committee.
