Nexus, New Standards in Optimisation and Process Integration

Ing. Luca Lanzi,

Chrome

Nexus Optimization Framework

Integrate your design process, distribute and schedule analyses, inter-operate and exchange data between applications, manage, visualize and organize results. These are the concepts around which we develop Nexus, our optimization suite.

Our plug-in technology makes the architecture of Nexus fully customizable by the users' community: on demand plug-ins can be defined whenever a deeper integration with specific analysis tools is required.

Modules

The modular technology around which Nexus has been designed makes it fully customizable by the users' community: on demand plug-ins can be defined whenever a direct integration with specific analysis tools is required.
